

Plan of the Day for Friday, 7 June 2013

Submitted by wpetersen on Fri, 06/07/2013 - 09:24

Date:

Friday, June 7, 2013 - 09:15

Discussion:

Walt P. now back on as MS through project end. Expecting only scattered convection today so should be a good day to work on things in preparation for tomorrow afternoon/night event.

NPOL nominal but we will work on sticky vertical mechanical switch this morning so that we can run in ALT mode efficiently. Goal is to complete by noon. XPOL's nominal (comms were restored to XPOL2). D3R nominal. 2DVD: Guys will try to find and resolve the comms problems.

NOTE- we will continue with WX forecast briefings through the weekend as we do anticipate convection/precipitation on Saturday/Sunday and into next week (with some uncertainty about Tuesday/Wednesday).
